## VIALS – COSMETIC INLINE INSPECTION

Visual inspection is nowadays mandatory equipment in a **state-of-the-art tube converting production line**. The **VISline.C family** of camera-based systems has been expanded to cover **all inspection requirements** directly **on board in production line**.

After the annealing oven, the **cosmetic inspection** is typically performed as **the latest step before packaging**. Here, systems have different viewing angles and multiple cameras, to ensure a **whole inspection and guarantee the container's quality**.

In both cases, the object is **usually taken from the line with a push-up or rotating mechanism** to present the product in front of the cameras with the best repeatability.

### ADVANTAGES

- **100% in-line cosmetic inspection**
- **contactless, machine vision based**
- **easy set-up** and configuration
- **rejection of bad products**
- **statistical analysis** of production
