

# FMsystems

## FILM, FOILS, SHEETS

### INLINE AND OFFLINE MEASUREMENTS

Our **FMsystems** can measure the thickness profile of plastic materials, even of stratified ones. Measurement can be performed both in the laboratory and directly at the end of the production process. Through the **simple and intuitive software interface**, also designed by **NIROX**, it is possible to monitor the entire production, with activities of **reporting**, and to manage waste. Systems are based on our m-Thick or multi-Thick sensors.

## APPLICAZIONI

- technical films for automotive
- multilayer film
- covering foils
- sheets for special applications

## VANTAGGI

- 100% inline quality control
- contactless
- easy configuration
- reporting of non-compliance in real time
- statistical analysis of production
