

PROCESS INSPECTION

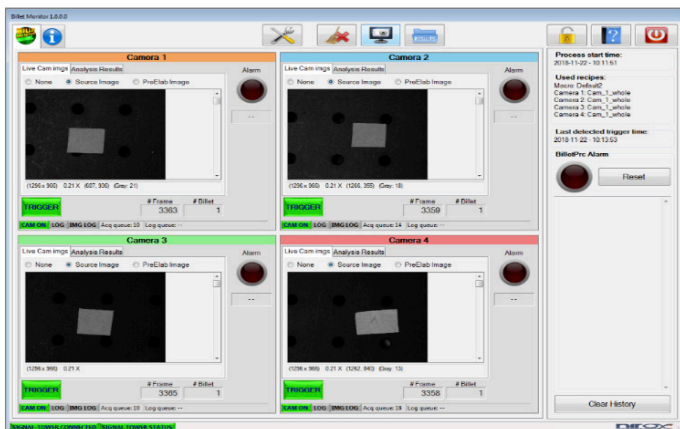

VIDEO ANALYSIS OF ROLLING MILL

METAL

The **inspection system** for monitoring of a **rolling mill** is equipped with various **camera modules**, suitable for the **particularly harsh environment**, and with a centralized image processing system according to specific algorithms, capable of **intercepting product stranding**.

Built on customized specifications but scalable on other applications, it represents one of the several examples of **NIROX's capabilities** to offer **tailor-made solutions** for **in line measurements and inspections**.

ADVANTAGES

- **customized realization** on specific needs
- **inspection in harsh environments**
- **camera based system**
- **predictive control of product stranding**
- **quick integration** into production line
- **easy to use**
